a step above

Since 2000, Caisson Laboratories in Logan, Utah has been providing the biotechnology industry with superior animal and plant cell culture products that are now available in Egypt exclusively through International Trade Association.

our products

Caisson Laboratories is committed to providing you with the tools you need however you need them:

- *Powder Media*
- *Liquid Media*
- *Sera*
- *Gelling Agents*
- *Plant Growth Regulators*
- *Antibiotics & Reagents*
- *Custom Services*

Every Caisson product is manufactured according cGMP guidelines and thoroughly tested to ensure quality. Test criteria include identity, moisture content, particle size, pH, sterility, endotoxin, mycoplasma, and cell culture performance.

cell culture your way

While Caisson Laboratories, Inc. offers a wide range of top-of-the-line, standard products, we also specialize in customizing products to meet your needs.

In as little as 4 weeks, we will have your custom formula made, tested, packaged, and shipped exactly the way you want it. Whether your ideal format is powder or liquid, packaged in milligrams or kilograms, Caisson is dedicated to providing you with all of the tools you need, however you need them.

animal cell culture technologies

Caisson offers reliable, consistent cell culture media for laboratory-scale through industrial-scale applications in both powder and liquid formats. Strict adherence to cGMP guidelines and thorough quality control testing ensure lot-to-lot consistency and maximum performance.

In addition to media, Caisson offers a diverse line of sera including bovine, equine, porcine, donkey, and a variety of other species. We have the capabilities to collect and process virtually any type of serum you need.

plant cell culture technologies

Caisson has established itself as a worldwide leader in the plant tissue culture industry. Our ability to customize products has enabled our customers to achieve new levels of success in their micropropagation and research efforts. We pride ourselves in offering the world's finest selection of media, gelling agents, plant growth regulators, antibiotics, vessels, and cell-culture-tested biochemicals.
